

# Konstantin Epishev ~ Software Engineer

## Summary

In commercial development since 2014. Especially experienced in web and frontend development. Interested in UX and DX. Trying to develop open source things that can improve and make easier working process. Keen in computer science and functional programming.

## Core skills

**JS** (any framework and library is not a problem, very fluent with React and Vue), **TS**, **CSS** (any preprocessor and modern specs), **Unit testing**, **E2E testing**, **TDD**, **BDD**.

Interested in blockchain technology and have some projects on **Go**, **Rust**, **Clojure**.

## Last experience

### [Endpass Inc.](#)

*2018-09 – now*

Participated at ecosystem development for working with personal data and effective working with Ethereum platform.

Have solved architectural questions, done some features and have supported [Endpass Wallet](#).

Made the first stable vision of the chain – [Endpass Auth](#) and [Endpass Connect](#). This stack allows to users integrate OAuth2 features. Also it can send Ethereum transactions and sign any data with user's account.

### [Usedesk](#)

*2018-02 – 2018-09*

Was a core frontend developer.

The key moment – re-implementation of current widget with new stack for better scalability and reliability. New version was in 4 times smaller and saved all exist features. This moment significantly reduced problems and bug relates to widget.
